

CineConnect Demo Data Seed Blueprint

Generated: 2026-07-18 Purpose: provide a complete, AI-friendly seed-data plan so another AI/database agent can populate CineConnect with realistic linked data and make every portal visibly functional for demos. Target API/database: <https://cine.nalexustechologies.com/api/v1/> production-shaped MySQL schema Business: CineConnect

Security note: do not put real passwords, real KYC documents, real bank accounts, or private phone numbers in demo data. Use synthetic files and clearly marked test identities.

1. How the seeding AI should use this document

This is not a random mock-data list. It is a linked scenario graph. The seed agent should create records in the order below so each portal has visible data connected to the same productions, users, bookings, contracts, payments, disputes, reports, and dashboards.

Recommended execution mode:

1. Use backend factories/API endpoints where available.
2. Use direct SQL only when an endpoint does not exist or when creating historical/demo-only rows.
3. Preserve the public IDs suggested here where possible. If the schema auto-generates public IDs, write an ID mapping file after insert.
4. Insert 10 demo records for each major portal domain. Super Admin needs only one admin user, but should see queues populated by everyone else's records.
5. Use the same 10 production backbone records across portals so the app feels coherent.
6. After seeding, run API health and sample list endpoints to confirm counts.

Recommended seed tag on every insert that supports notes/metadata:

- seed_batch: cineconnect-demo-2026-07-18
- is_demo: true
- created_by_seed: CINECONNECT_DEMO_DATA_SEED_BLUEPRINT

2. Global demo backbone

Use these 10 productions as the spine for all screens.

13	Agency, brand, model, distribution extension records	Specialist portals
14	Reviews, reports, blocks, moderation, disputes, support, announcements, notifications	Trust/safety and admin queues
15	Dashboard/export records	Final admin/personal dashboard polish

4. Users and roles to create

Create one Super Admin and at least 10 users for every major visible role group. Passwords should be generated by the seed agent and stored only in a local secure handoff file, not in this report.

4.1 Super Admin

Public ID	Display name	Email	Role	Purpose
DEM0-ADMIN-001	CineConnect Demo Admin	demo.admin@cineconnect.test	super_admin	One admin account to view all queues, dashboards, disputes, payments, KYC, support, broadcasts

4.2 Director/Producer users

Public ID	Name	Email	Linked project
DEM0-DP-001	Sara Nadeem	sara.dp@cineconnect.test	DEM0-PROJ-001

Public ID	Name	Email	Linked project
DEMO-DP-002	Hamza Rafiq	hamza.dp@cineconnect.test	DEMO-PROJ-002

4.4 Other portal owner users

Create 10 users each for:

- Model Extension: DEMO-MD-001 ... DEMO-MD-010
- Location Owner: DEMO-LO-001 ... DEMO-LO-010
- Media/Equipment Provider: DEMO-ME-001 ... DEMO-ME-010
- Crew Services: DEMO-CR-001 ... DEMO-CR-010
- Casting Agency: DEMO-CA-001 ... DEMO-CA-010
- Brand Sponsor: DEMO-BR-001 ... DEMO-BR-010
- Legal Partner: DEMO-LG-001 ... DEMO-LG-010
- Insurance Partner: DEMO-IN-001 ... DEMO-IN-010
- Distribution Partner: DEMO-DS-001 ... DEMO-DS-010

Use matching synthetic emails, for example model01@cineconnect.test, location01@cineconnect.test, and so on.

5. Shared files required for demo visibility

Create synthetic ready files. These can all point to small placeholder PDFs/JPGs/MP4 metadata in local storage; the demo only needs realistic file rows and download URLs.

File group	Count	Purpose
KYC ID front/back/selfie	30	At least 10 KYC submissions, plus admin queue variety
Portfolio photos	30	Actor/model/crew marketplace profiles
Showreel videos	10	AT-03, CA-05, marketplace detail
Project documents	20	DP room/files, contracts, legal review
Location photos/videos	30	LO listing wizard/performance
Equipment photos	30	ME inventory/packages/handover/return
Payment proofs	20	Payment proof screens and admin review
Insurance evidence	20	Claims/incidents/safety checks
Brand campaign proofs	20	BR campaign tracker/payments
Distribution report CSV/PDF placeholders	10	DS reports

Suggested naming:

- DEMO-FILE-KYC-001-FRONT
- DEMO-FILE-PORTFOLIO-001-A
- DEMO-FILE-PROJECT-001-SCRIPT
- DEMO-FILE-PAYMENT-001-PROOF

Broadcasts	/admin/broadcasts	3 announcements
Audit Logs	/admin/audit-logs	Auth/admin/payment audit events
Analytics	/admin/analytics	Aggregated dashboard rows

Recommended Super Admin demo state:

- 1 super admin user.
- 10 KYC submissions: 4 approved, 3 submitted, 2 rejected, 1 draft.
- 10 payment proofs: 4 pending, 4 approved, 2 rejected.
- 10 moderation cases: 5 open, 3 resolved, 2 escalated.
- 10 disputes: 4 open, 4 decided, 2 awaiting evidence.
- 10 support tickets: 5 open, 3 waiting user, 2 closed.
- 3 announcements: draft, published, scheduled/demo.

19. Trust, safety, payments, and communications seed pack

Create these cross-cutting records so shared screens look real:

Record type	Count	Linked screens
Reviews	20	AT reputation, public profiles, review screen
Review requests	10	Review prompts
Reports	10	Report screen, admin moderation
Blocked users	10	AT safety controls
Moderation cases	10	Admin content moderation/review hub

Record type	Count	Linked screens
Disputes	10	Admin disputes, support, payment/location/equipment issue flows
Support tickets	10	Admin support CRM
Notifications	30	Notification center and dashboards
Announcements	3	Broadcasts and notifications
Push devices	5	Push-device backend visibility

20. Payment/finance seed pack

At least 10 payment scenarios:

ID	Scenario	Screens powered
DEM0-PAY-001	Talent advance pending proof	DP payments, AT earnings, admin queue
DEM0-PAY-002	Location deposit approved	LO earnings, ledger
DEM0-PAY-003	Equipment rental proof rejected	ME earnings, admin review
DEM0-PAY-004	Crew milestone paid	CR contracts/payments
DEM0-PAY-005	Brand deliverable payment pending	BR payments
DEM0-PAY-006	Agency commission paid	CA commission
DEM0-PAY-007	Legal review billing record	LG billing
DEM0-PAY-008	Insurance claim reserve	IN claims
DEM0-PAY-009	Dispute holdback	Admin disputes/payments
DEM0-PAY-010	Final release settlement	DS/DP reports

Each scenario should include:

- payment schedule
- payment milestone
- optional proof file
- transaction/proof status
- receipt if approved
- ledger entry
- notification

21. Minimal endpoint/table mapping for the seed agent

Prefer these endpoints when seeding through API:

Domain	Endpoint family
Auth/users	/auth/register, /me/roles, direct admin SQL for super admin if needed
KYC/files	/uploads/presign, /uploads/{id}/binary, /uploads/{id}/complete, /kyc/submissions
Profiles/marketplace	/me/profile, /talent/profile, /marketplace/listings, /portfolio
Projects	/projects, /projects/{id}/requirements, /projects/{id}/room/items, /projects/{id}/files
Shortlists	/saved-searches, /shortlists, /shortlists/{id}/items
Bookings/chat	/bookings, /bookings/{id}/offers, /negotiations, /conversations families

Domain	Endpoint family
Contracts/legal	/contracts, /contracts/{id}/signatures, /legal-reviews families
Payments	/payment-schedules, /payment-proofs, /admin/payment-proofs, /ledger families
Operations	location/equipment/safety endpoints in operations.py
Insurance	insurance partner/policy/claim/evidence endpoints
Specialist	agency/brand/model/distribution endpoints in specialist.py
Trust/safety	/reviews, /reports, /blocked-users, /disputes, /support-tickets, /notifications
Analytics/exports	/me/dashboard, /admin/dashboard, /admin/analytics, /exports

If direct SQL is used, respect foreign keys and create rows in the insertion order from Section 3.

22. Demo validation checklist after seeding

Run these checks after data insertion:

1. GET /api/v1/health/ready returns database and Redis ok.
2. Login as DEMO-ADMIN-001.
3. Login as one user from every portal role.
4. Each portal dashboard shows non-empty metrics.
5. Each portal list screen shows at least 10 or meaningful multiple records.
6. Every detail screen opens with a valid route argument.
7. Every file-download button either downloads a synthetic file or is clearly disabled.
8. Booking negotiation flow has at least one active thread.
9. Contract viewer has at least one signable contract.
10. Payment proof queue has pending/approved/rejected examples.
11. Notification center has unread and read examples.
12. Super Admin dashboard shows populated queues.
13. /exports can create supported bookings, ledger, and admin_disputes CSV jobs.
14. AT-12 blocked users list loads and unblock works.
15. DS-03 submit changes live distribution project status/note.

23. Final recommendation

For a compelling demo, do not seed isolated fake rows. Seed the 10 production backbone first, then attach every portal's records to those productions. The app will feel much more real because the same project appears in discovery, booking, contracts, payments, legal, safety, insurance, distribution, admin queues, notifications, and dashboards.

Immediate next step for the seeding AI: create a `tools/seed_cineconnect_demo_data.py` script that reads this blueprint, creates deterministic public IDs, inserts in the order listed, and prints a login/account handoff table for the demo operator.
